

PETERHEAD LOW CARBON CCGT POWER STATION PROJECT

INVITATION TO VIEW VIRTUAL EXHIBITION

SSE Thermal and Equinor are seeking to develop and operate a new low carbon combined cycle gas turbine (CCGT) power station with a carbon capture plant (CCP) at Peterhead in Aberdeenshire.

The project will be located on land at the existing Peterhead Power Station in Aberdeenshire and will have a generating capacity of up to 910 megawatts (MW).

In line with both companies' vision and commitment to a net-zero future, the plant will use natural gas as its fuel and will be fitted with a carbon capture plant to remove the CO₂ from its emissions.

We are sharing the initial plans and proposals for the project and would like to invite members of the community to visit a virtual public exhibition to learn more about the project and provide initial comments.

The virtual public exhibition can be accessed online at peterheadlowcarbon.consultation.ai or via the project website www.ssethermal.com/peterheadccs

Our virtual exhibition will contain full details and the opportunity to provide comments.

All comments should be provided by Monday 7 June 2021
